Abstract
Over the past few years, the Persian and English translations of Quran have been studied from different standpoints throughout the centuries, Muslim and non-Muslim translators have been very concerned to convey the meaning of the Quran into languages other than Arabic. The holy Quran is a divine book and its translation into other languages must be done meticulously. In this regard, Persian and English translation of one of the surahs of this magnificent book was selected to be compared. The present study has gone through the investigation of the Persian translation of one of the surahs of this holy book “Yasin” by Dr. Elahi Ghomshei (1361) and its English translation by three famous translators Yusuf Ali (2000), Pickthall (1930) and Sarwar (2011) to see discrepancies. Also, this study tries to find out the unit of translation and classify different kinds of Vinay and Darbelnet’s procedures used by the English translators.

Keywords: Quran translation, Vinay, Darbelnet, Yasin, unit of translation.

INTRODUCTION
Aiming at guiding mankind into the right path, Holy Quran like other Religious texts has a very significant role in the life of man. Now, the question is how Quran’s universal message should be conveyed to the people. The answer is translation. Huge number of Muslims read the English translations of this Holy Book. So it seems necessary to pay due attention to the way these translations are done in different languages especially English. It’s the translators’ duty to try their bests in order to convey the same meaning into the target languages. In other words, the readers have no choice but to rely on a given translator’s faithful rendition.

Different Shiite scholars and clergymen translated this holy book into Persian which is now widespread in Iran and English has also been widespread throughout the world. Due to the critical need for an accurate and clear translation, academic research must be carried out in this domain. Therefore, as a sample, the present study has gone through the investigation of the Persian translation of one of the surahs of this holy book “Yasin” by “Dr. Elahi Ghomshei” and its English translation by three famous translators “Yusuf Ali”, “Pickthall” and “Sarwar” to see discrepancies. Also, this study tries to find out the unit of translation and classify different kinds of Vinay and Darbelnet’s procedures used by the English translators.

REVIEW OF THE LITERATURE
Over the past, the Persian and English translations of Quran have been studied from different standpoints. In this regard, the following studies are worth mentioning: Zolfagari [1] studies the reflection of the Quran in Persian proverbs. He reveals the reflection of signs in Persian proverbs in one of the underlying forms: 1) application of the original sign, 2) application of the content of sign, 3) using the words compositions, terms or Quranic interpretation or a part of the sign, 4) allusion of Quranic stories. His study shows that in every 3000 unrepeat published Persian proverbs, the direct effect of about 900 signs of Quran on 3 percent of these proverbs is clear, and that Most of the effective signs on proverbs are among the famous signs or in the 30th part of Qur'an.

Muhammed [2] concentrates on the errors of the translators in rendering the euphemistic expressions in the Quran. His aim in the study is to expose those translators who sacrifice euphemism at the expense of the original meaning and to reveal to what extent these wrong translations affect the understanding of the meaning. He
concludes that who mention the euphemism followed by a paraphrase are the best translators as make it easy for the target receivers to understand the intended meaning.

Abdelwali [3] examines the challenges that Quranic translators encounter at the lexical, structural/stylistic, and rhetorical levels. His study of existing English versions of the Quran shows that the communication of the message without considering the idiosyncrasies and prototypical features of the Quranic discourse is most translators’ aim. He concludes that the versatility of Quranic lexemes and styles were not seen in most of the English versions of the Quran.

Elhindi [4] in his paper categorized and explained the importance of metaphors in the Quran and proposed a cognitive approach regarding Lakoff and Johnson principles of the conceptual metaphor theory as a framework. His study focuses on spatial and temporal Quranic metaphors and investigates how they are used to help enhance the interpretation of specific concepts. Furthermore, he addressed the difficulty of translating Arabic metaphors into English and also shows how some of the English translations of metaphors fail to render some of the subtle meanings in the Arabic version.

Roozegar [5] in her thesis investigated the collocations of Quran and their translations into English and compared 7 English translations with its Persian counterpart and concluded that literal translation was the most frequent method applied by the translators.

Farahani [6] in his thesis discussed the methods that Quranic names were translated into English and the difficulty the translators faced in rendering these names. He studied three English translations and investigated the strategies adopted by the translators to find out the consistency in rendering these divine names.

Being one of the fundamental concepts always argued about in the realm of translation, the unit of translation (UT) has been given various definitions by different theorists. Shuttleworth and Cowie [7] define it as: “a term used to refer to the linguistic level at which ST is recodified in TL” (p. 192). Barkhudarov [8] defines a UT as “the smallest unit of SL which has an equivalent in TL” [7].

Phonemes, morphemes, words, phrases, sentences and entire texts are probable units of translation for him. What determines the appropriate UT, is the wording at a given point in ST. In Koller terms [9, 10], while closeness of SL and TL involves smaller UTs, translating from a SL which is not that much related to TL will usually result in choosing larger units.

Vinay and Darbelnet [11] totally draw on the concept of word as a basis for UT. They argue that what should be identified and distinguished as a unit for a translator, who's translating thoughts and concepts, is a unit of thought. Vinay and Darbelnet consider three following terms as being equivalent: “unit of thought”, “lexicological unit” and “unit of translation”. What they suggest as a definition for UT is “the smallest segment of the utterance whose signs are linked in such a way that they should not be translated literally” [12, 13].

**Methodology**

Major examples of linguistic theories of translation include Vinay and Darbelnet’s, inspired by Saussurean linguistics, Catford’s, influenced by an early version of Halliday’s systemic functional linguistics.

Having identified the linguistic concepts that they consider relevant to translation, Vinay and Darbelnet [11] turn their attention to the work of translators … the units they operate, and finally, the methods which allow the transfer from one language to another (emphasis original).

They point out that “the word on its own is unsuitable for consideration as the basis for a unit of translation” [11]. This is because the word is rarely the unit that signifies, and because meaning, which is what translators are concerned with, is not tied to any formal unit at all. Units of translation are, rather, “lexicological units within which lexical elements are grouped together to form a single element of thought” Vinay and Darbelnet [11]. There follows a long list of types of units (pp. 22–27), a discourse on the three planes of external stylistics, which are the lexicon, the syntactic structures, and the message (pp. 27–30). Compare the differences between English and French they identify two translation techniques that somewhat resemble the literal and free methods [11]. Direct (literal) translation discusses three possible strategies:

- **Literal translation or word-for-word**
  
  Vinay and Darbelnet say this translation method is only to be used under certain circumstances, i.e. translating word for word in a way that does not alter the meaning is considered an acceptable use of literal translation by the two scholars.
Calque, where the SL expression by considering its syntax is literally translated into the TL.

Borrowing – when discussing a new technical process for which no term exists within the TL, or when maintaining a word from the SL for stylistic effect, and for adding flavor to the target text (TT) the SL word is transferred directly into the TL and maintaining it in the target language.

Oblique (free) translation covers four strategies:

Transposition – interchange of parts of speech that don’t affect the meaning, i.e. changing word class without changing meaning.

Modulation – reversal of point of view (it isn’t expensive / it’s cheap). Modulation refers to rendering the TT from a different point of view to that of the ST. It is a way to find a degree of naturalness in TT without sacrificing any meaning or accuracy originating from the ST. Modulation at the levels of message along the following lines [14]:

- Abstract<>concrete or particular<>general
- Explicative modulation or effect<>cause
- Whole<>part
- Part<>another part
- Reversal of terms
- Negation of opposites
- Active<>passive
- Rethinking of intervals and limits in space and time
- Change of symbol

Equivalence – it is something cultural wherein the same meaning conveyed by a different expression, which is most useful for proverbs and idioms

Adaptation – cultural references may need to be altered to become relevant [15].

Research questions

RQ1: What strategies do the translators employ in rendering Yasin surah in English?

RQ2: What is the unit of translation used by each translator?

RESULTS AND DISCUSSION

Based on Vinay and Darbelnet [11] framework, the extracted data in the present study were classified according to the categorizations in the Persian text and the three English renderings. Then, the strategies applied by the three translators in each case were explored thoroughly.

In doing this research, the researcher selected three English translations of the Holy Quran in order to compare and contrast them with the Persian translation text done by “Elahi-qomshei” (). These three translations were done by Yusuf Ali [16], Sarwar [17], and Pickthall [18].

As it is clear all the three translators used borrowing for the translation of this verse.

As we can see in the Persian translation of this verse the translators used passive tense while in its English equivalents all the three translators used active voice which according to Vinay and Darbelnet the translators used modulation in this verse.
P: A revelation of the Mighty, the Merciful (5)

In this verse we have change of parts of speech in the Persian we have a verb which is rendered as a noun in English; therefore, we have transposition.

S: so that you may warn a people who are unaware because their fathers were not warned. (6)
Y: In order that thou mayest admonish a people, whose fathers had received no admonition, and who therefore remain heedless (of the Signs of Allah.) (6)
P: That thou mayst warn a folk whose fathers were not warned, so they are heedless. (6)

If one compares the Persian translation with its three English translations, then he might find out that they are not equal in terms of meaning and it can be said that they have semantic difference.

Y: The same is it to them whether thou admonish them or thou do not admonish them: they will not believe. (10)
P: Whether thou warn them or thou warn them not, it is alike for them, for they believe not. (10)

If one compares and contrasts the Persian and English translations, he will soon understand that in English they used literal translation to convey the same meaning.
In Sarwar translation we have "رویه" in Persian which is a noun but in English we have follow which is a verb so here we have modulation. In Persian we have "تاریک نیافته" but in English we have Quran in which the particular translated into a general term Quran so again in this part also we have modulation.

In Yusuf Ali translation we have difference of meaning in comparison to its Persian translation.

In Pickthall we have the literal translation of the Persian counterpart.

As it can be seen in all English translations we have literal translation.

In all the three translations we have negation of opposites which is a modulation procedure.
In Sarwar translation we have people for so the translator used the general word for the particular item and in the last part also used reversal of terms for rendering the same meaning; therefore, the translator used modulation in both parts.

Yusuf Ali and Pickthall used literal translation in this verse.

If we compare and contrast the Persian translation with its three English translations, we can understand that they have difference in meaning.

In both of the above translations the translators used the literal translation.

In both of the above translations the translators used negation of opposites which is part of a modulation procedure.

As it is clear all the three translators used negation of opposites to convey the same meaning into English; therefore, they used modulation in this verse.
Y: A Sign for them is the earth that is dead: We do give it life, and produce grain therefrom, of which ye do eat. (33)
P: A token unto them is the dead earth. We revive it, and We bring forth from it grain so that they eat thereof; (33)

In both of the above translations the translators used the verb eat for یشّر ّ تْق which is a noun so we can say that they used transposition in their translations.

و در زمین باگ ها از نخل خرما و انگور قرار دادیم و در ان چشم ها آب جاری ساختیم (34)

S: produced therein grains from which they eat and established therein gardens of palms trees and vineyards and have made streams flow therein (34)

Y: And We produce therein orchard with date-palms and vines, and We cause springs to gush forth therein: (34)
P: And We have placed therein gardens of the date-palm and grapes, and We have caused springs of water to gush forth therein, (34)

From the above translations it is clear that all the three translators used literal translations for conveying the same meaning in English.

تا مردم از میوه های آن باگ ها تناول کنند و از انواع غذاهای که (از این میوه ها و نباتات) به دست خود عمل می اورند نیز تنگه نمایند. ایا نباید شکر ان نعمت ها به جای اردن (35)

Y: That they may enjoy the fruits of this (artistry): It was not their hands that made this: will they not then give thanks? (35)
P: That they may eat of the fruit thereof, and their hands made it not. Will they not, then, give thanks? (35)

According to the bold face type of the above translations it is evident that they have difference in meaning with their Persian equivalent.

ّ تزُاى ظیگز تزای آًِا آًکَ ها فزسًعاى آًاى (یؼٌی تطز) را ظر کطتی پزتار سْار کزظاًیعین (ضایع ات.هثیل ّ تزى ّ طیارٍ همصْظ تاضع). (41)

S: how the sun is not supposed to catch-up with the moon, nor is the night to precede the day. All of them are to float in a certain orbit; (40)

Y: It is not permitted to the Sun to catch up the Moon, nor can the Night outstrip the Day: Each (just) swims along in (its own) orbit (according to Law). (40)
P: It is not for the sun to overtake the moon, nor doth the night outstrips the day. They float each in an orbit. (40)

In the first and the third translations, the translator used literal translation for rendering the same meaning in English.

In the second translation the active voice translated into the passive construction so we can say that the translator used modulation in this verse.

و برهران دیگر برای آنها آنکه ما فرزندان آن (یعنی بشر) را در کشتی پریبار سوار کردیم. (41)
P: And a token unto them is that We bear their offspring in the laden ship, (41)

In the Persian we have the general term wherein in English the translator used the particular word for rendering the same meaning; thus, he used modulation in this verse.

و نیز برای آنان به مانند کشتی جیزی که بر آن سواری شوند خلق کردیم (شادیات میلی و ترزم و طبیعت مخصوص باند). (42)

S: and created for them similar things to ride. (42)
P: And have created for them of the like thereof whereon they ride. (42)

In the above translation the translators used literal translation in rendering the same meaning in English.
S: and whenever a revelation out of their Lord's revelations comes to them, they ignore it (46)

P: Never came a token of the tokens of their Lord to them, but they did turn away from it! (46)

The translators used negation of opposites in rendering the verse in translation so the translators used modulation in this process.

ایی هٌکزاى لیاهت اًتظار ًکطٌع
ظر کارُای ظًیا یا ظر صیسَ ظّم لیاهت
وَ را فزا گیزظ ظر زالیکَ
تَ هزگ
سزافیل زك
خش یک صیسَ
تاُن تَ تسث ّ خعل هطغْلٌع. ظ(
49)

P: They await but one Shout, which will surprise them while they are disputing. (49)

In this verse the translator used modulation because he used negation of opposites.

S: When the trumpet is sounded, they will be driven out of their grave into the presence of their Lord. (51)

P: It is but one Shout, and behold them brought together before Us! (53)

The first translator used literal translation while the second translator used modulation as he used negation of opposites.

Ps در آن روز کمترین ظلمی به هیچکس نشود و جز آنچه عمل کرده اید ابنا رازورلای نخواهید یافت. (54)

Y: Then, on that Day, not a soul will be wronged in the least, and ye shall but be repaid the meeds of your past Deeds. (54)

P: This day no soul is wronged in aught; nor are ye requited aught save what ye used to do. (54)

In the Persian the bold face type words are verb which in the first translation they are translated as a noun in English, so the translator used transposition and modulation because the passive voice was translated into the active voice.

In the second translation like the first one we have English translation as the Persian used active while the Persian used passive.

In the last English translation, we have negation of opposites and of course modulation.

Y: "Did I not enjoin on you, O ye Children of Adam, that ye should not worship Satan; for that he was to you an enemy avowed? (60)

P: Did I not charge you, O ye sons of Adam, that ye worship not the devil - Lo! he is your open foe! (60)

و مرا پرستگ کنید، که این راه مستقیم، اساتید آید. (61)

Y: "And that ye should worship Me, (for that) this was the Straight Way? (61)

P: But that ye worship Me? That was the right path. (61)

In the two verses mentioned above the Persian and English translations are equal to each other and the translators used literal translation.

و همانا خلق بسیاری از شما نوع بشر را (این دیو) به گمراهی کشید، آیا عقل و فکر کنند نمی ستید ایتا از مکر و فرشب پرهیزهد. (62)
P: Yet he hath led astray of you a great multitude. Had ye then no sense? (62)

The bold face type is an expression in Persian and the translator also used an equivalent expression in English so we can say that the translator used equivalence in this verse.

و اگر بخواهیم احتمالا صورت آنها را مشخص کنیم اتآ به شکل سگان و بوزیگان شوند? که نه از آن صورت یا از آن جا! بتوانند گشته و یا به صورت اول) بارگذشته. (67)

P: And had We willed, we verily could have fixed them in their place, making them powerless to go forward or turn back. (67)

As one compares Persian and English translation of this verse he can easily find out that they are difference in meaning.

تا هر که را زنده دل است (یه آیات بنده و ازخدا و قیامت) برساند و بر کفاران (بیز به امام حجت) و عده عناص حتم و لازم گرد. (70)

P: To warn whosoever liveth, and that the word may be fulfilled against the disbelievers. (70)

The bold word in the Persian is a noun while in English a verb is used instead; therefore, the translator used transposition here.

آیا کفاران دندینه که بر آنها به دست (قدرت) خواه از جمله افرادگان چهارگانی خلقی کردنی تا منابع آنها شویند. (71)

S: Have they not seen what We have created from the labor of Our own hands? We have given them cattle (71)

Y: See they not that it is We Who have created for them - among the things which Our hands have fashioned - cattle, which are under their dominion? (71)

In the first translation we have the general term but in English we have the particular word as a result modulation was used here.

In the second translation an expression is replaced by its equivalent expression in English so here the translator used equivalence in this verse.

و ان حیوانات (یا عظمت و قوت) را مطلع و رام آنها ساختیم که هم بر آنها سوار شوند و هم از آنها عطا گندازند. (72)

Y: And that We have subjected them to their (use)? of them some do carry them and some they eat: (72)

Here the English translator used reversal of terms to render the same meaning in English, i.e., modulation was used here.

و برای آنها در ان حیوانات منافع (بسیاری از پوست و پشم و کرک و غیره) و اشامینی های فراوان (از شیر و ماست و روعن و غیره) هست، آیا شکر

S: From cattle they get milk and other benefits. Will they not then give thanks? (73)

Y: And they have (other) profits from them (besides), and they get (milk) to drink. Will they not then be grateful? (73)

In the first translation a general word in Persian is translated into a particular word in English and in the latter the passive construction in Persian changed into the active construction; thus, in both parts we have modulation.

هرگز آن خداونان کخوریل تصریحی به آنها توانند کرد و خوید این مشترکان مجابیاتان را مبایی حاضر خدمت حسنی را (دید) قیامت در آتش

Y: They have not the power to help them: but they will be brought up (before Our Judgment-seat) as a troop (to be condemned). (75)

P: It is not in their power to help them; but they (the worshippers) are unto them a host in arms. (75)

In the first translation the identified part is an effect while in its English counterpart the cause is used instead, the same is true for the second translation so in both parts modulation was used by the translators.

پس سخن این مشترکان تو را مجزون نکن. ما هر آنچه پنهان و اشکار گویند به حیرت دوامی (و به گفت کفاران می رسایم). (76)

S: Muhammad, let not their words annoy you. We certainly know whatever they conceal or reveal. (76)

P: So let not their speech grieve thee (O Muhammad). Lo! We know what they conceal and what proclaim. (76)

In the above translations the translators used literal translation to convey the meaning.

فرمان نافذ او چون اراده خلقی چیزی کن به محسوب اینکه گویه: "موجود بانش" بلاغالصا موجود خواهر داش (82)

S: Whenever He decides to create something He has only to say, "Exist," and it comes into existence. (82)
In the Persian the bold face word is a noun but in English a verb is used instead, so transposition is used in this verse.

پیس منزوء و یک گست خداونی که یک که منکست یا موجود به دست فقیدت او و نازگست شما همه خلاق به سوی ایست (83)

S: All glory belongs to the One in whose hands is the control of all things. To Him you will all return. (83)

Y: So glory to Him in Whose hands is the dominion of all things: and to Him will ye be all brought back. (83)

Both used literal translation to convey their meaning into English.

By comparing Persian translation of the Holy Quran and its three English counterparts and according to the data gathered above it can be understood that in: Sarwar translation: the translator mostly used modulation then benefited from literal translation and transposition and borrowing while rendering Yasin into English.

Yusuf Ali Translation: the translator mostly used modulation and literal translation and then transposition and borrowing and equivalence.

Pickthall translation: the translator benefited more from literal translation and modulation then from transposition, borrowing and equivalence.

In verses 6, 8 and 21 there exists discrepancies and difference in meaning between Persian and its three English translations.

In verse 11 there is a discrepancy between Yusuf Ali translation and its Persian counterpart.

In verse 35 the Persian translation was different from Pickthall and Yusuf Ali translation.

In verse 67 there exists a discrepancy between Pickthall and its Persian rendering.

**Conclusion**

Therefore, it seems that the selected translators regard modulation and literal translation as the best choices for the translation of Yasin surah. All three translators were so faithful to the meaning of Quran and they consider meaning of each verse as their unit of translation and they were so meticulous on choosing appropriate words for their translations. Furthermore, it can be said that their unit of translation was small which is suitable for translating an expressive and authoritative text such as Quran.
